11,00 going to “Artigiano in fiera “ exhibition Rho fiera

free afternoon

19,40 dinner at pizzeria

30 Sunday departure

The Finnish team was composed of Mr Juha-Ville Makinen Comenius coordinator and his colleagues Mr.Mauri Immonen Mr.Veli-Pekka Smura and Mr.Markku Paakkonen .

From Lubeck Mr Stephan Cosmus the Principal was pleased to take part in the meeting together with Gudrun Moellnitz, Comenius referent and his colleagues Regina Gabriel and Roland Portz who had previously visited our Institute as a teacher exchange in September. The students Inga Hause, Linda Milkewitsch, Thomas Pawlonka and Timo Siebahn were part of the German team and were welcomed by the students from 5AM and 4 AO. From Goteborg Marianne Muller the Principal was very pleased to visit us together with Emma Wladimir, Comenius referent, his colleagues Dan Hilmersson, Ingemar Davidsson and Lars Sjöstrand who had arrived the previous Tuesday as a teacher exchange.

The Italian team composed of the Principal, teachers students from the different departments Maxwell and Settembrini and school staff (administration, school assistants and caretakers) did their best in order to make our guests comfortable and appreciate the Italian hospitality. Every team tried to find out a common topic about safety and how safety is introduced to the students by the teachers. The Swedish showed us the 15 minute practical **gym**: every component of the school has to practise at the beginning of the school day, while the German students introduced how the companies usually train the apprentices about safety in their departments. The Italian students from the aeronautics showed the audience the different procedures before the take off while the students from electrical-electronics- mechanical departments explained the different safety procedures learned in the labs. Mr Makinen pointed out the necessity of finding common topics for a European safety curriculum. After some debates and discussions it was decided to involve companies on the key-skills they require to the apprentices in order to show statistics about this subject and if there is a common starting point for future projects.

The visit to the Museum of Science and technology was particularly appreciated and the guests had the opportunity to taste different food and drink from every region of Italy visiting the exhibition “L’artigiano in fiera” located in Rho. Even the students spent pleasant days with their Italian friends who have certainly understood what European collaboration and friendship mean!
