

# Practical safety and health procedures in Maxwell

*I.I.S.S. "J.C. Maxwell"*

*MGC - FM*

Milan Comenius meeting November 2008

# Practical activities in Maxwell

## Objectives

- Learning how to act in different emergency situations
- Learning how to behave in a correct way during work activities in order to prevent accidents

## Contents

- Safety instructions in the use of different equipment and devices
- Safety instructions in case of an emergency
- Safety instructions based on the correct work procedures

# Safe equipment and device instructions

- A safety module about the correct use of the equipment and device is introduced to the students at the beginning of the year.
- It includes theoretical and practical aspects.
- The correct application of the most suitable behaviour is developed by the teachers during the lab activities in every department.

# PRACTICAL SAFETY SIGNALS USED INSIDE THE SCHOOL BUILDING

Tensione  
elettrica  
pericolosa

Vietato fumare

- These are the most common safety signals that you can see on the walls of the school building

Students are supposed to pay attention and follow the instructions

Estintore

Protezione  
obbligatoria  
del viso

# THE EVACUATION TEST

- Another practical activity is the evacuation test consisting of the simulation of a fire emergency in a certain site of the school building.
- Before the test every class coordinator gives the students all the info about the evacuation rules.

# TRAINING FOR EVACUATION

- All new school staff is provided a training course of about 6 hours including first aid, evacuation procedures and fire prevention.
- Everyone has to attend the course while the new students get some leaflets about safety rules.

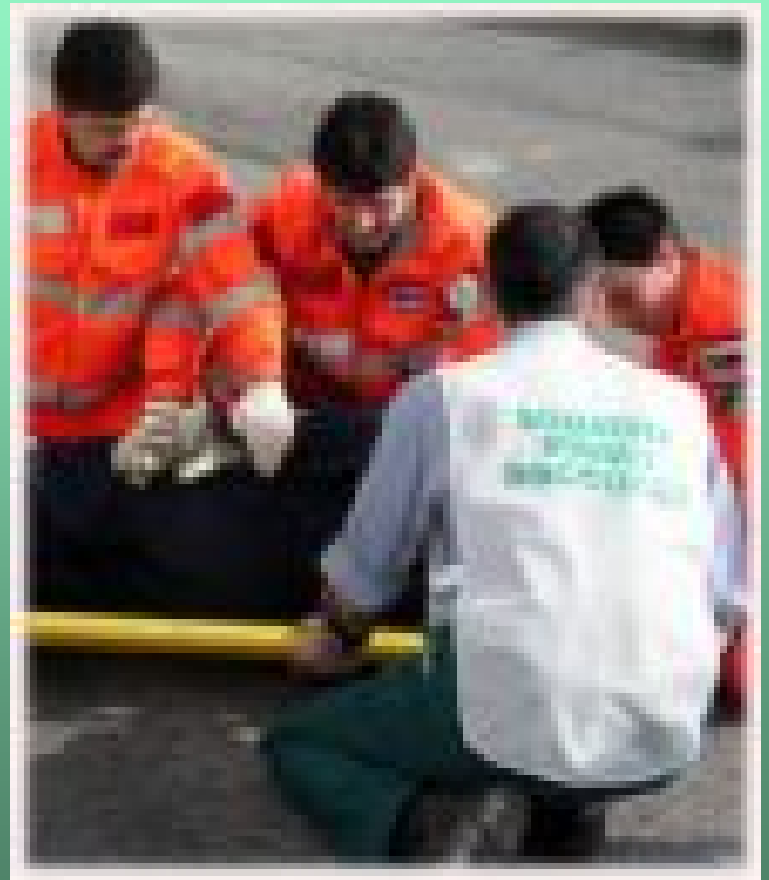

# FIRST AID

- A booklet about the first aid procedures is provided to all school staff.
- In case of an emergency some trained staff is responsible for the procedure applications.

## How to behave

- Most accidents happen during physical education classes.
- Students are required to inform the teacher and staff in charge and if possible, take care of the injured .

# First aid equipment

- Every lab and guardian site are provided with a first aid equipment container.
- The inside content is renewed periodically and there is a check list.

# Training courses

- Some training courses about first aid procedures and behaviour are organized periodically by the school principal in collaboration with the Ministry of Education.
- Students staff are invited to attend the courses in order to get ready for every inconvenience.

Now it is time for a simulation
